

2017 Enhancement Overview

Process Scheduler

(RFE 49465)

You can now schedule these processes to automatically run in the background:

- ACH reports
- ACH returns
- BC reports
- Day-end
- Credit reporting
- Letters and notices
- Easy out
- Parallel strategies
- Media load

You also have the option to create custom processes.

Sonnet Interface

(RFE 48854)

The Sonnet Interface is an optional feature that allows background communication between The Collector System and Sonnet. Sonnet is an automated credit-dispute-resolution system from Palinode. For more information about Sonnet, including installation, contact your Client Care representative or visit palinode.io.

New Mastercard Number Validation Range

(RFE 56407)

The Collector System now supports the new MasterCard 2-Series Bank Identification Number (BIN) range.

Multiple Credit Delay Tables

(RFE 55437)

You can now assign more than one credit reporting delay table to a client (Field 301 of the client control record). When you assign multiple delay tables, all the calculated delays must pass before an account is reported. For example, you could choose to only report accounts that satisfy delays based on delinquent date and assign date.

Additional Strategy Events

(RFE 57241)

You can now create strategies using two new events:

- Event code 13: Days since assignment or payment
- Event code 14: Days on strategy; reset by payment
